The Natural Response Treatments Collection

As we step into 2025, the focus in aesthetic medicine is clear: treatments that enhance rather than alter natural beauty. At The Cosmetic Skin Clinic, our 23 years of expertise and multiple industry awards, including the prestigious Aesthetics Award for Best Clinic Group, position us as leaders in the evolution of non-surgical beauty enhancements.

Our Natural Response Treatments represent the next generation of aesthetics.

These advanced procedures engage your skin's natural regenerative processes, delivering results that are subtle yet transformative. By actually improving the quality of your skin and activating the skin's regenerative mechanisms, we achieve outcomes that not only look completely natural but continue to improve over time, without the need to restructure the face or add anything artificial.

Our team of expert practitioners, each with advanced certifications in regenerative medicine, has carefully curated the most effective treatments to include in our Natural Response Treatments Collection.

These treatments redefine aesthetic medicine, responding to the growing preference for the “undetectable era” - where enhancements blend seamlessly with natural features, leaving no visible traces of intervention.

Skin Regeneration

Biostimulators

Laser & Light Rejuvenation

SKIN REGENERATION

Profilo & Polynucleotides

Regenerative skin treatments are a breakthrough in aesthetic medicine, unlocking the skin's ability to repair, renew, and rejuvenate itself. Advanced injectable solutions Profilo and Polynucleotides deliver deep hydration, tissue repair, and long-term skin health while enhancing elasticity and radiance.

Profilo deeply hydrates the skin, improving elasticity and creating a youthful glow by stimulating collagen and hyaluronic acid production.

Polynucleotides promote tissue repair and cellular renewal, improving the skin's structure and restoring resilience over time.

Typically administered in two sessions spaced a month apart, regenerative treatments offer visible results in 4 - 6 weeks. Patients experience firmer, smoother, and more resilient skin, with hydration and repair processes continuing to improve long after the initial treatment. By working with your body's natural systems, these treatments deliver subtle yet lasting rejuvenation.

Polynucleotides activate the skin's own cellular repair and regeneration mechanism which restores skin firmness and protects against cellular damage, improving quality and texture of the skin in the most natural way.”

– Dr Anju Mehta

BIOSTIMULATORS

Sculptra & Radiesse

Biostimulators Sculptra and Radiesse represent the forefront of natural, long-lasting facial rejuvenation. These treatments go beyond traditional fillers, activating your skin's natural collagen production and stimulating new tissue growth to rebuild structure, restore volume, and enhance elasticity for results that evolve over time.

Sculptra gradually restores facial volume and improves skin structure, offering subtle and long-lasting rejuvenation.

Radiesse provides immediate volume while stimulating collagen production for a natural lift and long-term enhancements.

With results developing over 3-6 months and lasting up to 24 months, biostimulators offer subtle yet transformative improvements. Ideal for patients seeking enduring enhancements, these treatments work with your body's natural processes to deliver a refreshed and youthful appearance.

LASER & LIGHT REJUVENATION

Forever Young BBL & MOXI Laser

Laser and light treatments combine cutting-edge technology with the body's natural healing processes to deliver comprehensive skin rejuvenation. Forever Young BBL and MOXI Laser are designed to improve tone, texture, and overall skin health, offering noticeable results with minimal downtime.

Forever Young BBL addresses redness, pigmentation, and uneven tone while stimulating collagen production for a brighter, clearer complexion.

MOXI Laser utilises fractional laser technology to smooth fine lines, reduce sun damage, and enhance skin texture.

Results are visible after 1-3 sessions, with ongoing maintenance treatments recommended every 6-12 months for lasting radiance. By working in harmony with your body's natural processes, MOXI Laser and Forever Young BBL deliver long-lasting improvements that leave your skin refreshed, revitalised and glowing.
